IN THE CLAIMS

Please amend the claims as follows.

1. (Currently Amended) A method comprising:

receiving in a second device an event from a first device, the event being captured in the first device and associated with a term of an article, the event being indexed and associated with the term in a first index of the first device; and

indexing the event in a second index of the second device such that the event is associated with the term in the second index.

~~providing a first index on a first machine, wherein the first index is associated with at least one event, the event comprising machine activity associated with an article; and~~

~~associating the event with a second index on a second machine.~~

2. (Currently Amended) The method of claim 1, wherein one or more of the first device ~~machine~~ and the second device ~~machine~~ is a client device.

3. (Currently Amended) The method of claim 1, wherein one or more of the first device ~~machine~~ and the second device ~~machine~~ is a server device.

4. (Currently Amended) The method of claim 1, wherein the term ~~plurality of terms~~ is associated with a plurality of events IDs, the plurality of event IDs associated with a plurality of events.

5. (Currently Amended) The method of claim 1, wherein the event ~~plurality of events~~ is stored in a queue.

6. (Currently Amended) The method of claim 1, wherein the event ~~plurality of events~~ is stored in a database.

7. (Currently Amended) The method of claim 1, further comprising:

monitoring system resources; and

sending the event to the second device when a resource level of the system resources is above a desired level.

~~prior to sending the plurality of events to a second machine~~

8. (Currently Amended) The method of claim 7, wherein monitoring the system resources comprises monitoring available memory on the first device ~~machine~~.

9. (Currently Amended) The method of claim 7, wherein monitoring the system resources comprises monitoring available memory on the second device ~~machine~~.

10. (Currently Amended) The method of claim 7, wherein monitoring the system resources comprises monitoring bandwidth, network latency, jitter, or cost.

11. (Currently Amended) The method of claim 7, wherein monitoring the system resources comprises monitoring server activity.

12. (Currently Amended) The method of claim 7, wherein monitoring the system resources comprises monitoring client activity.

13. (Currently Amended) The method of claim 7, further comprising:

holding the event ~~wherein events are held~~ in a queue when the system resources are below a threshold value.

14. (Currently Amended) The method of claim 7, wherein the event is ~~events are~~ not accepted by the second device ~~system~~ when the system resources are below a threshold value.

15. (Original) The method of claim 1, wherein the first index is located on a client computer and the second index is located on a network server.

16. (Original) The method of claim 1, wherein the first index is located on a first client computer and the second index is located on a second client computer.

17. (Currently Amended) The method of claim 1, wherein at least one of the first index and the second index is ~~the indexes are~~ encrypted.

18. (Currently Amended) The method of claim 1, wherein at least one of the first index and the second index ~~indexes~~ is searchable over a network.

19. (Currently Amended) A computer-readable medium containing program code comprising:

program code for receiving in a second device an event from a first device, the event being captured in the first device and associated with a term of an article, the event being indexed and associated with the term in a first index of the first device; and

program code for indexing the event in a second index of the second device such that the event is associated with the term in the second index.

~~program code for providing a first index on a first machine, wherein the first index is associated with at least one event, the event comprising machine activity associated with an article;~~

~~program code for associating the event with a second index or a second machine.~~

20. (Currently Amended) The computer-readable medium of claim 19, wherein one or more of the first device ~~machine~~ and the second device ~~machine~~ is a client device.

21. (Currently Amended) The computer-readable medium of claim 19, wherein one or more of the first device ~~machine~~ and the second device ~~machine~~ is a server device.

22. (Currently Amended) The computer-readable medium of claim 19, wherein the term ~~plurality of terms~~ is associated with a plurality of events IDs, the plurality of event IDs associated with a plurality of events.

23. (Currently Amended) The computer-readable medium of claim 19, wherein the term ~~plurality of terms~~ is stored in a queue.

24. (Currently Amended) The computer-readable medium of claim 19, wherein the term ~~plurality of terms~~ is stored in a database.

25. (Currently Amended) The computer-readable medium of claim 19, further comprising:

program code for monitoring system resources; and

program code for sending the event to the second device when a resource level of the system resources is above a desired level.

~~prior to sending the plurality of events to a second machine~~

26. (Currently Amended) The computer-readable medium of claim 25, wherein monitoring system resources comprises monitoring available memory on the first device ~~machine~~.

27. (Currently Amended) The computer-readable medium of claim 25, wherein monitoring the system resources comprises monitoring available memory on the second device ~~machine~~.

28. (Currently Amended) The computer-readable medium of claim 25, wherein monitoring the system resources comprises monitoring bandwidth, network latency, jitter, or cost.

29. (Currently Amended) The computer-readable medium of claim 25, wherein monitoring the system resources comprises monitoring server activity.

30. (Currently Amended) The computer-readable medium of claim 25, further comprising:

program code for holding the event ~~wherein events are held~~ in a queue when the system resources are below a threshold value.

31. (Original) The computer-readable medium of claim 19, wherein the first index is located on a client computer and the second index is located on a network server.

32. (Original) The computer-readable medium of claim 19, wherein the first index is located on a first client computer and the second index is located on a second client computer.

33. (Currently Amended) The computer-readable medium of claim 19, wherein at least one of the first index and the second index is ~~the indexes are~~ encrypted.

34. (Currently Amended) The computer-readable medium of claim 19, wherein at least one of the first index and the second index ~~indexes~~ is searchable over a network.

35. (Currently Amended) A method comprising:

capturing an event, the event comprising event data;

associating an event ID with the event;

providing a first index, the first index comprising a plurality of terms associated with a plurality of events;

associating the event ID with each of the terms in the first index that comprise the event;

storing the event in a first ~~database~~ repository;

retrieving the event;

sending the event to a second client;

receiving the event as a new event, the new event comprising event data;

associating a new event ID with the new event;

providing a second index, the second index comprising a plurality of terms associated with a plurality of events;

associating the new event ID with terms in the second index that comprise the new event;

storing the new event in a second repository, wherein the second index and the second ~~database~~ repository are substantially the same as the first index and the first repository.

36. (Currently Amended) A system comprising:

means for receiving in a second device an event from a first device, the event being captured in the first device and associated with a term of an article, the event being indexed and associated with the term in a first index of the first device; and

means for indexing the event in a second index of the second device such that the event is associated with the term in the second index.

~~a means for providing a first index on a first machine, wherein the first index is associated with at least one event, the event comprising machine activity associated with an article; and~~

~~a means for associating the event with a second index on a second machine.~~
